# Chapter 1

## Namespace Index

### 1.1 Packages

Here are the packages with brief descriptions (if available):

<a href="#">InfiniteJumper</a> . . . . .	7
--	---

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

InfiniteJumper.LevelBuilder . . . . .	14
InfiniteJumper.LevelLoader . . . . .	18
MonoBehaviour	
FixedRatio . . . . .	11
InfiniteJumper.Darkness . . . . .	9
InfiniteJumper.DataPersistence . . . . .	10
InfiniteJumper.FadeIn . . . . .	11
InfiniteJumper.FollowTarget . . . . .	12
InfiniteJumper.GameOver . . . . .	12
InfiniteJumper.Head . . . . .	13
InfiniteJumper.HighScore . . . . .	13
InfiniteJumper.LevelChunkPreBuild . . . . .	15
InfiniteJumper.LevelChunk . . . . .	16
InfiniteJumper.LevelChunkManager . . . . .	17
InfiniteJumper.MainMenu . . . . .	19
InfiniteJumper.Platform . . . . .	20
InfiniteJumper.Player . . . . .	20
InfiniteJumper.Score . . . . .	23
InfiniteJumper.Shadow . . . . .	25
InfiniteJumper.UIFlash . . . . .	26
InfiniteJumper.ScoreData . . . . .	24
InfiniteJumper.TilePrefab . . . . .	25

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">InfiniteJumper.Darkness</a>	Handles the translation of the gameobject that chases the player from the bottom of the screen.	9
<a href="#">InfiniteJumper.DataPersistence</a>	Data persistence. Handles saving and loading of high score. . . . .	10
<a href="#">InfiniteJumper.FadeIn</a>	Simple fade in script for CanvasRenderer. . . . .	11
<a href="#">FixedRatio</a>	. . . . .	11
<a href="#">InfiniteJumper.FollowTarget</a>	Attach to camera to smoothly track player. . . . .	12
<a href="#">InfiniteJumper.GameOver</a>	Handles game over state. On game over: enables game over ui and saves high score. . . . .	12
<a href="#">InfiniteJumper.Head</a>	Handles death of player when <a href="#">InfiniteJumper.Darkness</a> enters trigger. Invokes InfiniteJumper. LevelChunks.OnDeath. . . . .	13
<a href="#">InfiniteJumper.HighScore</a>	Updates highscore UI on main menu. . . . .	13
<a href="#">InfiniteJumper.LevelBuilder</a>	Handles constructing (instantiating) the level chunks. . . . .	14
<a href="#">InfiniteJumper.LevelChunkPreBuild</a>	A level chuck that is static and built at start. Used to construct the empty level chunk underneath player at game start. . . . .	15
<a href="#">InfiniteJumper.LevelChunk</a>	Level chunk. . . . .	16
<a href="#">InfiniteJumper.LevelChunkManager</a>	Builds new InfiniteJumper.LevelChunks when required. Stores current position and builds new chunks at current y position. . . . .	17
<a href="#">InfiniteJumper.LevelLoader</a>	Responsible from loading the level data from file. . . . .	18
<a href="#">InfiniteJumper.MainMenu</a>	Plays background audio clip if present. Loads game scene if any key is pressed. . . . .	19
<a href="#">InfiniteJumper.Platform</a>	Attach to the platform tile prefab. Handles destruction when <a href="#">InfiniteJumper.Darkness</a> enters trigger. . . . .	20
<a href="#">InfiniteJumper.Player</a>	The main player movement script, also updates current score based on the players y position.	20
<a href="#">InfiniteJumper.Score</a>	Score UI component for main game scene. . . . .	23

<a href="#">InfiniteJumper.ScoreData</a>	
Class to store serializable score data. . . . .	24
<a href="#">InfiniteJumper.Shadow</a>	
Attach to the shadow tile. Destroys this gameobject if its associated platform tile is destroyed. .	25
<a href="#">InfiniteJumper.TilePrefab</a>	
Used to map a GameObject to its character representation in file. All prefabs should be of the same size. . . . .	25
<a href="#">InfiniteJumper.UIFlash</a>	
User interface flash. Acts as an overlay for the main menu and gameplay scene. . . . .	26

## Chapter 4

# Namespace Documentation

### 4.1 InfiniteJumper Namespace Reference

#### Classes

- class [Darkness](#)  
*Handles the translation of the gameobject that chases the player from the bottom of the screen.*
- class [DataPersistence](#)  
*Data persistence. Handles saving and loading of high score.*
- class [FadeIn](#)  
*Simple fade in script for CanvasRenderer.*
- class [FollowTarget](#)  
*Attach to camera to smoothly track player.*
- class [GameOver](#)  
*Handles game over state. On game over: enables game over ui and saves high score.*
- class [Head](#)  
*Handles death of player when [InfiniteJumper.Darkness](#) enters trigger. Invokes InfiniteJumper.LevelChunks.OnDeath.*
- class [HighScore](#)  
*Updates highscore UI on main menu.*
- class [LevelBuilder](#)  
*Handles constructing (instantiating) the level chunks.*
- class [LevelChunkPreBuild](#)  
*A level chunk that is static and built at start. Used to construct the empty level chunk underneath player at game start.*
- class [LevelChunk](#)  
*Level chunk.*
- class [LevelChunkManager](#)  
*Builds new InfiniteJumper.LevelChunks when required. Stores current position and builds new chunks at current y position.*
- class [LevelLoader](#)  
*Responsible from loading the level data from file.*
- class [MainMenu](#)  
*Plays background audio clip if present. Loads game scene if any key is pressed.*
- class [Platform](#)  
*Attach to the platform tile prefab. Handles destruction when [InfiniteJumper.Darkness](#) enters trigger.*
- class [Player](#)  
*The main player movement script, also updates current score based on the players y position.*
- class [Score](#)

[Score](#) UI component for main game scene.

- class [ScoreData](#)

*Class to store serializable score data.*

- class [Shadow](#)

*Attach to the shadow tile. Destroys this gameobject if its associated platform tile is destroyed.*

- class [TilePrefab](#)

*Used to map a GameObject to its character representation in file. All prefabs should be of the same size.*

- class [UIFlash](#)

*User interface flash. Acts as an overlay for the main menu and gameplay scene.*

## Chapter 5

# Class Documentation

### 5.1 InfiniteJumper.Darkness Class Reference

Handles the translation of the gameobject that chases the player from the bottom of the screen.

Inheritance diagram for InfiniteJumper.Darkness:

#### Public Attributes

- float [movementSpeed](#)  
*Base movement speed.*
- Transform [player](#)  
*Movement speed is based the movementSpeed and the distance from player.*
- [GameOver](#) [gameOverHandler](#)  
*Called in the event of the players death.*
- bool **canMove** = false

#### 5.1.1 Detailed Description

Handles the translation of the gameobject that chases the player from the bottom of the screen.

#### 5.1.2 Member Data Documentation

##### 5.1.2.1 [GameOver](#) InfiniteJumper.Darkness.gameOverHandler

Called in the event of the players death.

##### 5.1.2.2 float InfiniteJumper.Darkness.movementSpeed

Base movement speed.

### 5.1.2.3 Transform InfiniteJumper.Darkness.player

Movement speed is based the movementSpeed and the distance from player.

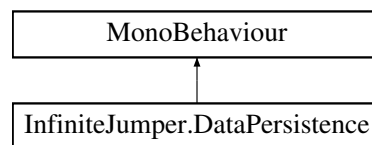

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Darkness.cs

## 5.2 InfiniteJumper.DataPersistence Class Reference

Data persistence. Handles saving and loading of high score.

Inheritance diagram for InfiniteJumper.DataPersistence:

### Public Member Functions

- void [Load](#) ()  
*Load the highscore from file.*
- void [Save](#) (int score)  
*If score greater that store highscore then it is saved to file.*

### Properties

- int [Score](#) [get]  
*Gets the high score. Loaded from file.*
- static [DataPersistence instance](#) [get]  
*Gets the instance of this class. Can be accessed from any script.*

### 5.2.1 Detailed Description

Data persistence. Handles saving and loading of high score.

### 5.2.2 Member Function Documentation

#### 5.2.2.1 void InfiniteJumper.DataPersistence.Load ( )

Load the highscore from file.

#### 5.2.2.2 void InfiniteJumper.DataPersistence.Save ( int score )

If score greater that store highscore then it is saved to file.

## Parameters

<i>score</i>	<a href="#">Score.</a>
--------------	------------------------

### 5.2.3 Property Documentation

#### 5.2.3.1 DataPersistence InfiniteJumper.DataPersistence.instance [static],[get]

Gets the instance of this class. Can be accessed from any script.

The instance.

#### 5.2.3.2 int InfiniteJumper.DataPersistence.Score [get]

Gets the high score. Loaded from file.

The score.

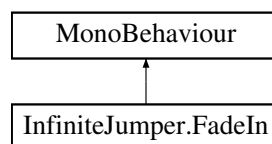

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/DataPersistence.cs

## 5.3 InfiniteJumper.FadeIn Class Reference

Simple fade in script for CanvasRenderer.

Inheritance diagram for InfiniteJumper.FadeIn:

### 5.3.1 Detailed Description

Simple fade in script for CanvasRenderer.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/UI/FadeIn.cs

## 5.4 FixedRatio Class Reference

Inheritance diagram for FixedRatio:

## Public Attributes

- float **ratioX** = 3f
- float **ratioY** = 4f

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/FixedRatio.cs

## 5.5 InfiniteJumper.FollowTarget Class Reference

Attach to camera to smoothly track player.

Inheritance diagram for InfiniteJumper.FollowTarget:

## Public Attributes

- Transform **target**
- float **ySmoothing**
- float **yMargin**

### 5.5.1 Detailed Description

Attach to camera to smoothly track player.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/FollowTarget.cs

## 5.6 InfiniteJumper.GameOver Class Reference

Handles game over state. On game over: enables game over ui and saves high score.

Inheritance diagram for InfiniteJumper.GameOver:

## Public Member Functions

- void `OnGameOver` ()  
*Raised on game over. Shows game over ui and saves high score.*

## Public Attributes

- [UIFlash](#) **uiFlash**
- [Score](#) **score**
- `GameObject[]` **gameOverUI**

### 5.6.1 Detailed Description

Handles game over state. On game over: enables game over ui and saves high score.

### 5.6.2 Member Function Documentation

#### 5.6.2.1 `void InfiniteJumper.GameOver.OnGameOver ( )`

Raised on game over. Shows game over ui and saves high score.

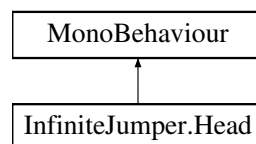

The documentation for this class was generated from the following file:

- `/Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/GameOver.cs`

## 5.7 InfiniteJumper.Head Class Reference

Handles death of player when [InfiniteJumper.Darkness](#) enters trigger. Invokes `InfiniteJumper.LevelChunks.OnDeath`.

Inheritance diagram for `InfiniteJumper.Head`:

## Public Attributes

- [Player](#) **player**

### 5.7.1 Detailed Description

Handles death of player when [InfiniteJumper.Darkness](#) enters trigger. Invokes `InfiniteJumper.LevelChunks.OnDeath`.

The documentation for this class was generated from the following file:

- `/Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Player/Head.cs`

## 5.8 InfiniteJumper.HighScore Class Reference

Updates highscore UI on main menu.

Inheritance diagram for `InfiniteJumper.HighScore`:

### 5.8.1 Detailed Description

Updates highscore UI on main menu.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/UI/HighScore.cs

## 5.9 InfiniteJumper.LevelBuilder Class Reference

Handles constructing (instantiating) the level chunks.

### Public Member Functions

- [LevelBuilder](#) (Dictionary< char, GameObject > tileLookUp)  
*Initializes a new instance of the [InfiniteJumper.LevelBuilder](#) class.*
- GameObject [BuildChunkAtPosition](#) (Vector2 position, [LevelChunk](#) level)  
*Builds the level chunk at specified position.*
- GameObject [BuildChunkAtPosition](#) (Vector2 position, string[,] levelGrid)  
*Builds the level chunk at specified position.*

### 5.9.1 Detailed Description

Handles constructing (instantiating) the level chunks.

### 5.9.2 Constructor & Destructor Documentation

#### 5.9.2.1 InfiniteJumper.LevelBuilder.LevelBuilder ( Dictionary< char, GameObject > tileLookUp )

Initializes a new instance of the [InfiniteJumper.LevelBuilder](#) class.

Parameters

<i>tileLookUp</i>	Tile look up. Dictionary of GameObject prefabs along with their associated char representation in file.
-------------------	---

### 5.9.3 Member Function Documentation

#### 5.9.3.1 GameObject InfiniteJumper.LevelBuilder.BuildChunkAtPosition ( Vector2 position, LevelChunk level )

Builds the level chunk at specified position.

Returns

The chunk at position.

## Parameters

<i>position</i>	Position.
<i>level</i>	Level.

5.9.3.2 GameObject InfiniteJumper.LevelBuilder.BuildChunkAtPosition ( Vector2 *position*, string *levelGrid*[,] )

Builds the level chunk at specified position.

## Returns

The chunk at position.

## Parameters

<i>position</i>	Position.
<i>levelGrid</i>	Level grid.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/LevelBuilder.cs

## 5.10 InfiniteJumper.LevelChuckPreBuild Class Reference

A level chuck that is static and built at start. Used to construct the empty level chuck underneath player at game start.

Inheritance diagram for InfiniteJumper.LevelChuckPreBuild:

## Public Attributes

- string [levelFileName](#)  
The name of the level file stored in the Resources/Levels folder.
- [TilePrefab\[\]](#) [tilePrefabs](#)  
The tile prefabs. A list of tile prefabs and associated char representation.

## 5.10.1 Detailed Description

A level chuck that is static and built at start. Used to construct the empty level chuck underneath player at game start.

## 5.10.2 Member Data Documentation

## 5.10.2.1 string InfiniteJumper.LevelChuckPreBuild.levelFileName

The name of the level file stored in the Resources/Levels folder.

### 5.10.2.2 TilePrefab [ ] InfiniteJumper.LevelChuckPreBuild.tilePrefabs

The tile prefabs. A list of tile prefabs and associated char representation.

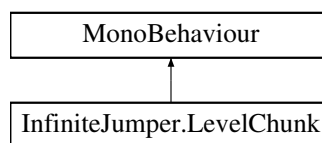

The documentation for this class was generated from the following file:

- `/Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/LevelChuckPreBuild.cs`

## 5.11 InfiniteJumper.LevelChunk Class Reference

Level chunk.

Inheritance diagram for InfiniteJumper.LevelChunk:

### Public Member Functions

- void [Initialise](#) ()  
*Initialise this instance. Creates new instance of [InfiniteJumper.LevelLoader](#) .*

### Public Attributes

- string [levelFileName](#)  
*The name of the level file stored in the Resources/Levels folder.*
- float [weight](#) = 1  
*The chance of this level chunk to spawn. This chance is proportional to the weights of the other InfiniteJumper.  
LevelChunks*

### Static Public Attributes

- static readonly int [WIDTH](#) = 12  
*The width of the level chunk.*
- static readonly int [HEIGHT](#) = 20  
*the height of the level chunk.*

### Properties

- string[,] [levelGrid](#) [get]  
*Returns an initialised array of string representing a level chunk.*

### 5.11.1 Detailed Description

Level chunk.

### 5.11.2 Member Function Documentation

#### 5.11.2.1 void InfiniteJumper.LevelChunk.Initialise ( )

Initialise this instance. Creates new instance of [InfiniteJumper.LevelLoader](#) .

### 5.11.3 Member Data Documentation

#### 5.11.3.1 readonly int InfiniteJumper.LevelChunk.HEIGHT = 20 [static]

the height of the level chunk.

#### 5.11.3.2 string InfiniteJumper.LevelChunk.levelFileName

The name of the level file stored in the Resources/Levels folder.

#### 5.11.3.3 float InfiniteJumper.LevelChunk.weight = 1

The chance of this level chunk to spawn. This chance is proportional to the weights of the other InfiniteJumper.↔ LevelChunks

#### 5.11.3.4 readonly int InfiniteJumper.LevelChunk.WIDTH = 12 [static]

The width of the level chunk.

### 5.11.4 Property Documentation

#### 5.11.4.1 string [,] InfiniteJumper.LevelChunk.levelGrid [get]

Returns an initialised array of string representing a level chunk.

The level grid.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/LevelChunk.cs

## 5.12 InfiniteJumper.LevelChunkManager Class Reference

Builds new InfiniteJumper.LevelChunks when required. Stores current position and builds new chunks at current y position.

Inheritance diagram for InfiniteJumper.LevelChunkManager:

## Public Attributes

- Transform [player](#)  
*The players y position is tracked to decide when to spawn new InfiniteJumper.LevelChunks.*
- [TilePrefab\[\]](#) [tilePrefabs](#)  
*The tile prefabs. A list of tile prefabs and associated char representation.*
- int [chucksToPreLoad](#) = 3  
*Number of InfiniteJumper.LevelChunks to load at start of game.*
- bool [preLoadLevelDataFromFile](#) = true  
*If true, all InfiniteJumper.LevelChunks data is loaded from the relevant files at game start.*

### 5.12.1 Detailed Description

Builds new InfiniteJumper.LevelChunks when required. Stores current position and builds new chunks at current y position.

### 5.12.2 Member Data Documentation

#### 5.12.2.1 int InfiniteJumper.LevelChunkManager.chucksToPreLoad = 3

Number of InfiniteJumper.LevelChunks to load at start of game.

#### 5.12.2.2 Transform InfiniteJumper.LevelChunkManager.player

The players y position is tracked to decide when to spawn new InfiniteJumper.LevelChunks.

#### 5.12.2.3 bool InfiniteJumper.LevelChunkManager.preLoadLevelDataFromFile = true

If true, all InfiniteJumper.LevelChunks data is loaded from the relevant files at game start.

#### 5.12.2.4 [TilePrefab \[\]](#) InfiniteJumper.LevelChunkManager.tilePrefabs

The tile prefabs. A list of tile prefabs and associated char representation.

The documentation for this class was generated from the following file:

- [/Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/LevelChunkManager.↔cs](#)

## 5.13 InfiniteJumper.LevelLoader Class Reference

Responsible from loading the level data from file.

### Public Member Functions

- [LevelLoader](#) (string fileName)  
*Initializes a new instance of the [InfiniteJumper.LevelLoader](#) class.*
- string[,] [LoadLevel](#) ()  
*Loads the level data from file and converts it to a 2d array of strings. Returns cached data if level data already loaded.*

## Static Public Attributes

- static readonly string `LOCAL_LOCATION` = "Levels/"  
*The local level data file location.*

### 5.13.1 Detailed Description

Responsible from loading the level data from file.

### 5.13.2 Constructor & Destructor Documentation

#### 5.13.2.1 InfiniteJumper.LevelLoader.LevelLoader ( string fileName )

Initializes a new instance of the `InfiniteJumper.LevelLoader` class.

Parameters

<code>fileName</code>	The filename of the level data to load.
-----------------------	---

### 5.13.3 Member Function Documentation

#### 5.13.3.1 string [,] InfiniteJumper.LevelLoader.LoadLevel ( )

Loads the level data from file and converts it to a 2d array of strings. Returns cached data if level data already loaded.

Returns

The level data.

### 5.13.4 Member Data Documentation

#### 5.13.4.1 readonly string InfiniteJumper.LevelLoader.LOCAL\_LOCATION = "Levels/" [static]

The local level data file location.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/LevelLoader.cs

## 5.14 InfiniteJumper.MainMenu Class Reference

Plays background audio clip if present. Loads game scene if any key is pressed.

Inheritance diagram for InfiniteJumper.MainMenu:

## Public Attributes

- AudioClip **backgroundAudio**

### 5.14.1 Detailed Description

Plays background audio clip if present. Loads game scene if any key is pressed.

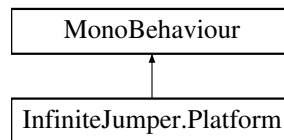

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/UI/MainMenu.cs

## 5.15 InfiniteJumper.Platform Class Reference

Attach to the platform tile prefab. Handles destruction when [InfiniteJumper.Darkness](#) enters trigger.

Inheritance diagram for InfiniteJumper.Platform:

## Public Attributes

- GameObject **explosionParticleContainer**

## Properties

- bool **beingDestroyed** [get]

### 5.15.1 Detailed Description

Attach to the platform tile prefab. Handles destruction when [InfiniteJumper.Darkness](#) enters trigger.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Platform.cs

## 5.16 InfiniteJumper.Player Class Reference

The main player movement script, also updates current score based on the players y position.

Inheritance diagram for InfiniteJumper.Player:

## Public Member Functions

- void [MoveLeft](#) ()  
*Move character left in next call to FixedUpdate. Called on button down.*
- void [StopMovingLeft](#) ()  
*Stop moving the character left. Called on button up.*
- void [MoveRight](#) ()  
*Move character right in next call to FixedUpdate. Called on button down.*
- void [StopMovingRight](#) ()  
*Stop moving the character left. Called on button up.*
- void [Jump](#) ()  
*Makes the character jump (if on ground) or double jump (if already in the air and has not already double jumped).*
- void [OnDeath](#) ()  
*Called on death event. Plays [InfiniteJumper.Player.audioOnDeath](#), disables player sprite and enables on death particles. Destroys object after a set amount of time.*

## Public Attributes

- float [maxSpeed](#) = 10f  
*Maximum left/right movement speed.*
- float [jumpForce](#) = 700f  
*The force applied when the player jumps.*
- Transform [groundCheck](#)  
*The location to perform a check to see if the player is touching the ground.*
- LayerMask [groundMask](#)  
*The layer mask for tiles that the player can stand on.*
- AudioClip[] [jumpClips](#)  
*Audio clips to play when the player jumps.*
- AudioClip[] [walkClips](#)  
*Clips to play as the player walks on the ground.*
- AudioClip[] [audioOnDeath](#)  
*Audio clip to play on death.*
- Vector3 [groundScale](#)  
*Player scale when on ground.*
- Vector3 [jumpingScale](#)
- GameObject [explosionParticleContainer](#)  
*The explosion particle container. The gameobject the holds the particle system used when the player dies and explodes.*
- ParticleSystem [landParticle](#)  
*The land particle. Any particle system for when the player lands on the ground after a jump.*
- [Score](#) [score](#)  
*Used to update the current score and the corresponding text.*
- GameObject [playerSpriteContainer](#)  
*The gameobject that holds the players sprite. This is disabled when the player dies.*

### 5.16.1 Detailed Description

The main player movement script, also updates current score based on the players y position.

## 5.16.2 Member Function Documentation

### 5.16.2.1 void InfiniteJumper.Player.Jump ( )

Makes the character jump (if on ground) or double jump (if already in the air and has not already double jumped).

### 5.16.2.2 void InfiniteJumper.Player.MoveLeft ( )

Move character left in next call to FixedUpdate. Called on button down.

### 5.16.2.3 void InfiniteJumper.Player.MoveRight ( )

Move character right in next call to FixedUpdate. Called on button down.

### 5.16.2.4 void InfiniteJumper.Player.OnDeath ( )

Called on death event. Plays [InfiniteJumper.Player.audioOnDeath](#), disables player sprite and enables on death particles. Destroys object after a set amount of time.

### 5.16.2.5 void InfiniteJumper.Player.StopMovingLeft ( )

Stop moving the character left. Called on button up.

### 5.16.2.6 void InfiniteJumper.Player.StopMovingRight ( )

Stop moving the character left. Called on button up.

## 5.16.3 Member Data Documentation

### 5.16.3.1 AudioClip [] InfiniteJumper.Player.audioOnDeath

Audio clip to play on death.

### 5.16.3.2 GameObject InfiniteJumper.Player.explosionParticleContainer

The explosion particle container. The gameobject the holds the particle system used when the player dies and explods.

### 5.16.3.3 Transform InfiniteJumper.Player.groundCheck

The location to perform a check to see if the player is touching the ground.

### 5.16.3.4 LayerMask InfiniteJumper.Player.groundMask

The layer mask for tiles that the player can stand on.

### 5.16.3.5 Vector3 InfiniteJumper.Player.groundScale

[Player](#) scale when on ground.

**5.16.3.6 AudioClip [ ] InfiniteJumper.Player.jumpClips**

Audio clips to play when the player jumps.

**5.16.3.7 float InfiniteJumper.Player.jumpForce = 700f**

The force applied when the player jumps.

**5.16.3.8 ParticleSystem InfiniteJumper.Player.landParticle**

The land particle. Any particle system for when the player lands on the ground after a jump.

**5.16.3.9 float InfiniteJumper.Player.maxSpeed = 10f**

Maximum left/right movement speed.

**5.16.3.10 GameObject InfiniteJumper.Player.playerSpriteContainer**

The gameobject that holds the players sprite. This is disabled when the player dies.

**5.16.3.11 Score InfiniteJumper.Player.score**

Used to update the current score and the corresponding text.

**5.16.3.12 AudioClip [ ] InfiniteJumper.Player.walkClips**

Clips to play as the player walks on the ground.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Player/Player.cs

## 5.17 InfiniteJumper.Score Class Reference

[Score](#) UI component for main game scene.

Inheritance diagram for InfiniteJumper.Score:

### Public Member Functions

- void [IncrementScore](#) (int amount)  
*Increments the score by amount. Updates UI.*
- void [SetScore](#) (int score)  
*Sets the score. Updates UI.*

## Properties

- int [currentScore](#) [get]  
*Gets the current score.*

### 5.17.1 Detailed Description

[Score](#) UI component for main game scene.

### 5.17.2 Member Function Documentation

#### 5.17.2.1 void InfiniteJumper.Score.IncrementScore ( int *amount* )

Increments the score by amount. Updates UI.

##### Parameters

<i>amount</i>	Amount.
---------------	---------

#### 5.17.2.2 void InfiniteJumper.Score.SetScore ( int *score* )

Sets the score. Updates UI.

##### Parameters

<i>score</i>	<a href="#">Score</a> .
--------------	-------------------------

### 5.17.3 Property Documentation

#### 5.17.3.1 int InfiniteJumper.Score.currentScore [get]

Gets the current score.

The current score.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/UI/Score.cs

## 5.18 InfiniteJumper.ScoreData Class Reference

Class to store serializable score data.

### Public Member Functions

- **ScoreData** (int round)

### Properties

- int **Round** [get]

### 5.18.1 Detailed Description

Class to store serializable score data.

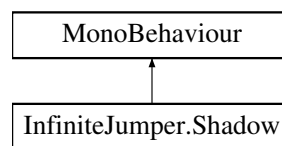

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/DataPersistence.cs

## 5.19 InfiniteJumper.Shadow Class Reference

Attach to the shadow tile. Destroys this gameobject if its associated platform tile is destroyed.

Inheritance diagram for InfiniteJumper.Shadow:

### 5.19.1 Detailed Description

Attach to the shadow tile. Destroys this gameobject if its associated platform tile is destroyed.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/Shadow.cs

## 5.20 InfiniteJumper.TilePrefab Class Reference

Used to map a GameObject to its character representation in file. All prefabs should be of the same size.

### Public Attributes

- GameObject [prefab](#)  
*The tile prefab.*
- char [textRepresentation](#)  
*The character representation of the prefab in the level text files.*

### 5.20.1 Detailed Description

Used to map a GameObject to its character representation in file. All prefabs should be of the same size.

### 5.20.2 Member Data Documentation

#### 5.20.2.1 GameObject InfiniteJumper.TilePrefab.prefab

The tile prefab.

#### 5.20.2.2 char InfiniteJumper.TilePrefab.textRepresentation

The character representation of the prefab in the level text files.

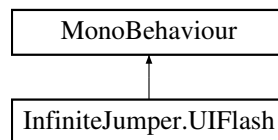

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/Level/TilePrefab.cs

## 5.21 InfiniteJumper.UIFlash Class Reference

User interface flash. Acts as an overlay for the main menu and gameplay scene.

Inheritance diagram for InfiniteJumper.UIFlash:

### Public Member Functions

- void [GameOverUIFlash](#) ()  
*Games the over user interface flash.*

### Public Attributes

- bool [isMenu](#)  
*Overlay behaviour is different for menu and game scene. For menu, the overlay is less translucent.*

#### 5.21.1 Detailed Description

User interface flash. Acts as an overlay for the main menu and gameplay scene.

#### 5.21.2 Member Function Documentation

##### 5.21.2.1 void InfiniteJumper.UIFlash.GameOverUIFlash ( )

Games the over user interface flash.

#### 5.21.3 Member Data Documentation

##### 5.21.3.1 bool InfiniteJumper.UIFlash.isMenu

Overlay behaviour is different for menu and game scene. For menu, the overlay is less translucent.

The documentation for this class was generated from the following file:

- /Users/robert/Dropbox/Work/Unity/Infinite Jumper/Assets/InfiniteJumper/Scripts/UI/UIFlash.cs
